DANI DECLARES

House Manager Operations Kit

A field kit for managing household-support work

Fillable on screen. Print-ready. One set per client or engagement.

Edition 2 draft | We handle the execution.

How to use this kit

One set per client or engagement

The six pieces

1. Client household profile: record only what the job needs
2. Authorized recurring work: separate the agreed routine from unapproved requests
3. Visit plan and loadout: prepare before arriving, record what was actually completed
4. Changes and approvals: a request is not authorized just because it was mentioned
5. Handoff and next shift: make the next visit clear without sharing private details
6. Closeout and client confirmation: check that completion and decisions are recorded

Working rule

Confirm scope and authorization before performing work. Record changes and communicate at handoff. Write the client or engagement name on every page and keep the set together. Page 8 shows an example of a new request moving from "mentioned" to "approved" before any work is done.

Client or engagement

Prepared by

Start date

Client household profile

Record only what the job needs; store sensitive details securely

Client or household

Engagement start date

Primary contact and preferred method

Who approves work and changes

Service address or area

Household members and pets relevant to the work

Access method (never codes or passwords)

Products and preferences to follow

Areas or items off limits

Emergency contact the client chose to share

Checkpoints

Do not write entry codes, passwords or account details here | Store this page securely, not in a vehicle or shared space

Authorized recurring work

Separate the agreed routine from unapproved requests

Frequency	Task	Authorized by and date	Next due

Checkpoints

Only list work the client has approved | Update the next-due date at every visit

Visit plan and loadout

Prepare before arriving; document what is actually completed

Client or household

Visit date and arrival window

Task or supply	Planned	Completed	Notes

Checkpoints

Mark completed only what was actually done | Note supplies that need restocking

Changes and approvals

Do not treat a new request as authorized because it was mentioned

Status key

NEEDS CLIENT DECISION | APPROVED | DECLINED | DONE

Requested change	Status	Client approval and date	Action

Checkpoints

No work on a change until it is approved | Added charges go through the agreed quoting process

Handoff and next shift

Make the next visit clear without sharing unnecessary private details

Visit date

Handed off by and to

Completed	Pending	Client decision needed	Next step

Checkpoints

Leave out private details the next person does not need | Flag anything waiting on the client

Example: a change trail

An illustration. Not a real client

How one request moved

1. Original approved work: weekly pantry inventory and kitchen reset
2. New request: organize garage storage
3. Status: NEEDS CLIENT DECISION, because it is outside approved scope
4. Client response: approved for a separate visit; written approval recorded
5. Current visit: kitchen reset completed; garage work not performed
6. Handoff: confirm the next appointment and any added charges through the agreed quoting process

Why it matters

The garage request was recorded the moment it came up, but no garage work happened until the client approved it in writing for a separate visit. The original scope stayed intact.

Closeout and client confirmation

Check that completion and decisions are recorded

Deliverable	Evidence or note	Confirmed by	Date

Open items carried forward

Client confirmation (name and date)

Checkpoints

Every change has a recorded decision | Return or account for keys and access items

Shift readiness and privacy

Handoffs should protect scope, safety and private information

Checkpoint	Verified (initials, date)
Approval on file for every task this shift	
Access permissions confirmed through a secure channel	
Who may receive records is clear	
Scheduled tasks match authorized work	
Escalation contact known	

Required before dispatch

Review approval, access permissions, who may receive records, scheduled tasks and escalations.

Private records

Use approved secure systems for client contact details and documents. Never record entry codes or passwords.

Vendor and contract ledger

Contacts, scope and verified paperwork, without access codes

Vendor or trade	Quote or approval	Insurance or due
HVAC (example)	Quote pending. No authorization yet	Certificate requested
Plumber (example)	Client approval needed	Verify if required

Note

Record insurer, coverage dates and proof reference only when contractually necessary. A listed certificate is not legal verification; confirm directly with the issuer when needed.

Work order and access boundary

A request is not permission to enter or perform added work

Job, property and date

Approved scope and spending cap

Authorized by, method and time

Insurance and licensing checks (as applicable)

Arrival and completion evidence

Key or access return log

Site access

Provided through a secure approved channel. Never place lockbox codes, alarm PINs or other access credentials in a shared or printed workbook.

Shift SOP and role matrix

Define completion, handoff and escalation before work begins

Task	Owner and cadence	Definition of done
Kitchen reset	Staff A, daily	Approved checklist signed
Laundry and linens	Staff B, weekly	Count and room placement verified
Deliveries	Manager, as needed	Received and client notified

Limit

Workers may only perform duties within their agreements, training, legal eligibility and approved client scope.

Asset and warranty registry

Maintenance history should stay searchable when a vendor changes

Asset and location	Model or ID reference	Last / next service
Air system	See secure asset register	
Water heater	See secure asset register	
Appliance	See secure asset register	

Note

Store complete serial numbers and warranty documents in a protected client file if needed. Follow manufacturers' guidance; never assume identical service intervals.

Preventive work schedule

Make upcoming tasks visible; reminders are not authorization

Task	Frequency / next	Client confirmed? (date)
HVAC filter check	Manufacturer-specific	
Leak and drainage visual check	Agreed property schedule	
Smoke and CO alarm checks	Manufacturer and local rules	
Pest assessment	As needed, qualified provider	
Seasonal exterior review	Approved schedule	

Limit

Do not perform licensed trade work or bypass manufacturer instructions. Escalate safety conditions promptly.

Expense and purchase approvals

Track what was proposed versus what was actually authorized

Request or vendor	Estimate or cap	Approved / receipt
Replacement air filter (example)	Example $35 cap	Client approved in writing
Plumbing repair (example)	Quote requested	PENDING. Do not order

Note

Use secure systems for card or payment data. Reconcile receipts to invoices; do not promise legal or tax treatment.

Incident escalation record

For non-emergency documentation. Immediate threats need emergency services

Observed time and area

What was seen (facts, not guesses)

Immediate safe action

Who was notified and when

Client decision or authorization

Follow-up owner and deadline

Remember

Do not delay emergency response to complete a form. Record factual details and protect health, family and staff privacy.

Approval and change log

An estimate, a verbal comment or a text is not completed authorization

Request	Status / decision	Evidence
Garage reorganization (example)	Needs decision	Quote sent, pending
Replace faucet (example)	Approved, scope limited	Email reference and date

Statuses

Requested, Quoted, Approved or Declined, Assigned, QA, Closed. Save approval references in an appropriately secure record.

QA and handoff acceptance

Close work with evidence, not an unchecked Done box

Deliverable	Verify / proof	Accepted by
Routine reset	Checklist and condition note	
Vendor service	Invoice and completion photo if permitted	
Asset maintenance	Service receipt and next due	

Remember

Obtain permission for images and restrict access to household information. Do not represent a client approval that was never received.

Example: a weekly workflow

A completed example makes the blank tools easier to use

Mon / Tue	Wed / Thu	Fri / close
Prioritize kitchen and laundry	Request HVAC quote	Client approves filter only
Log leaking tap observation	Proposal remains pending	Vendor repair NOT sent
Order supplies under cap	Check receipts	File proof and next steps

What it shows

Restraint. The leaking tap is reported, but no plumber is dispatched without approval. This is an illustration, not a real customer.

My own week, using the same pattern

Implementation and scope limits

Finish the handoff without overstating what a PDF can do

Before using this toolkit

- [ ] I confirmed the operator's actual authority: tasks, spending limits and vendors
- [ ] I keep personnel, client and vendor records secure and collect only what the job needs
- [ ] I checked local law, insurance and qualifications for any specialized work
- [ ] I will record factual proof of completed work and keep unresolved items visible

Quick closeout questions

- [ ] What is done, and what evidence supports that?
- [ ] What is still waiting on a client decision?
- [ ] Who owns the next step?
- [ ] Where are the secure records stored?

Limits

This is an operational documentation toolkit, not an attorney-drafted contract, legal advice, a staffing agency, or a substitute for professional risk assessment.

Usage and license

Read before use

What this is not

Not scheduling software, a client portal, an employment agreement, or a substitute for applicable legal requirements. A printable, fillable PDF with no automatic scheduling or syncing.

Working rule

Confirm scope and authorization before performing work. Record only the information necessary for the job and store sensitive details securely.
